DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

2. Claim 2 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

The POS (B) of formula (II) is described in the specification as an alternative form of POS (A) of formula (I). The POS (B) of formula (II) does not further limit the POS (A) of formula (I) because POS (B) of formula (II) only requires a functional group of epoxy type, while POS (A) requires a functional group of epoxy type and a functional group of a polyoxyalkylene ether.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which

Art Unit: 1795

applicant regards as the invention.

The structure of the siloxyl units of formula (I)/(II): $R^1_x R^2_y R^3_z SiO_{(4-x-y-z)/2}$ is indefinite because it is unclear how the R^1 , R^2 , and R^3 radicals are bonded to the SiO and how the 2 siloxyl units of formula (I) are bonded to each other. It is also unclear whether $(4-x-y-z)/2$ refers to "O" or "SiO".

It is also unclear how POS (B) of formula (II) of claim 2 further limits POS (A) of formula (I) of claim 1.

It is also unclear how POS (A) of formula (VIII) of claim 5 further limits POS (A) of formula (I) of claim 1.

It is also unclear what the symbol " η " in claims 19, 22, and 23 represents.

It is also unclear what the symbol " Φ " in claims 22 and 23 represents.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lee (US 2002/0028388) discloses a battery electrolyte composition comprising a polysiloxane-polyoxyalkylene compound, a lithium salt, and a polymerization initiator, wherein the composition is polymerized by electron beam. West et al (US 2003/0198869) discloses a cross-linked polysiloxane polymer having oligooxyethylene side chains that is polymerized to provide a solid electrolyte useful in lithium batteries. Okada (US 2002/0051911) discloses a curable composition for a polymer electrolyte comprising a polysiloxane having a cyclic ether structure containing group as a substituent on a silicon atom.
